

PERLITE

PREMIUM QUALITY HORTICULTURAL PERLITE

HY-GEN® PERLITE

HY-GEN® PERLITE is a natural expanded substrate, which can be used to improve the soil profile for potted plants. It can be combined with cocopeat to increase drainage. It can also be used as a medium for aquaponics, hydroponics and general gardening. It can also be used for decorating indoor and outdoor pots and gardens.

HY-GEN® PERLITE is sourced from high quality material, which is low in heavy metals. It maintains a strong structure and is less likely to crush under pressure. The particle size and strength ensures that it meets the highest standards for horticulture. It is prepared and processed under strict guidelines to meet high standards, quality, strength and moisture holding capability.

HY-GEN® PERLITE is pH stable and therefore does not affect or change the pH conditions around the root zone. This allows the nutrients to do the job they are intended to do. It doesn't contain nuisance chemicals such as sodium, which could otherwise adversely affect plant health.

HY-GEN® PERLITE is compatible with soluble hydroponic specific nutrients and aquaponic growing systems. HY-GEN® PERLITE is great for home gardeners and large-scale commercial farms. For best results, use HY-GEN® HYDRO GROWTH and HYDRO BLOOM two-part formula and single part formulas when growing plants in HY-GEN® PERLITE.

- PREMIUM QUALITY
- DERIVED FROM NATURAL SOURCES
- REUSABLE
- pH STABLE
- NO HARMFUL CHEMICALS ADDED
- LOW SALT
- EXCELLENT DRAINAGE
- HIGH WATER HOLDING AND POROSITY

PACK SIZES AVAILABLE

Code	Description	Pallet
PER025	25 Litres Perlite Bags	60
PER050	50 Litres Perlite Bags	50
PER100	100 Litres Perlite Bags	21

Strong mineral structure!

HINTS & TIPS

Use HY-GEN® PERLITE inside the base of pots to help drainage. A thin layer placed on the surface of potted plants can also help prevent evaporation.
